PROFESSIONAL SUMMARY

SDE with 1.9 years of hands-on experience with agentic AI systems using the Azure AI Agent SDK and Azure AI Foundry — covering agent orchestration, tool calling, thread/session state management, and multi-region agent workflow validation for Microsoft. Also builds production B2B backends and full-stack platforms. Currently developing 1StopMandi — a Hyperpure-inspired B2B food-supply platform — from the ground up as sole engineer.

EXPERIENCE

Terawe Corporation – Bengaluru, India

Jun 2024 – Present

Software Development Engineer

Microsoft Azure AI Foundry – Agentic AI Validation Platform

- Worked hands-on with the Azure AI Agent SDK to deploy, configure, and validate agentic AI workflows on Azure AI Foundry across 10+ global regions – covering agent creation, tool registration, run execution, and thread/session state management ahead of Microsoft’s public rollouts
- Architected a pytest-based E2E testing framework targeting the full agentic lifecycle – agent orchestration, multi-turn thread management, tool-calling flows, and LLM response validation – reducing production incidents by 40% and enabling early failure detection for Microsoft engineering teams
- Designed a three-tier monitoring infrastructure using KQL-driven Jarvis monitors with IcM integration, delivering automated incident generation and real-time observability across all agent-serving regions for 24/7 platform health coverage

Internal HRMS Platform – Full-Stack Development

- Engineered a company-wide HRMS platform as sole full-stack developer using MERN stack with Redux state management, serving 50+ employees with real-time dashboards for leave tracking, holiday calendars, team structures, and comprehensive employee management
- Developed an advanced leave management system with automated holiday/weekend detection, calendar integration, and multi-tier approval workflows (Manager → HR → Admin), reducing approval turnaround time by 60%
- Built role-based admin modules enabling seamless employee onboarding/offboarding, team creation, and granular permission controls, eliminating manual HR processes and improving operational efficiency across the organisation

PERSONAL PROJECTS

1StopMandi – B2B Fresh Produce Supply Platform | Node.js, Express.js, PostgreSQL, REST APIs, JWT | 📅 Feb 2024

- Architected and built a production-grade B2B food supply backend (inspired by Hyperpure by Zomato) serving restaurants and cloud kitchens, featuring 60+ REST API endpoints across 12 domain modules including catalog, cart, orders, pricing, and admin management
- Designed a multi-tier slab pricing engine with city-specific overrides, customer-level pricing, bulk-quantity discounts, and full audit trail – resolving the correct price per unit dynamically based on buyer identity, order quantity, and delivery location
- Implemented an inventory reservation system using PostgreSQL transactions with concurrent-safe stock holds during checkout, preventing overselling in high-concurrency scenarios with auto-expiry and a background cleanup job
- Built a complete order lifecycle with status transition guards, PDF invoice generation (PDFKit), delivery tracking timeline, reorder from history, and event-driven architecture designed for async downstream consumers (Kafka-compatible schema)
- Engineered role-based access control with OTP-based JWT authentication, admin panel APIs for order management, user blocking, uploaded order processing workflow, and a pricing management console with deactivation and audit history
- Established a sequential migration system with transaction-wrapped execution and idempotent seed files, maintaining 21 schema migrations covering pricing slabs, reservation tables, delivery tracking, and user blocking across iterative development

CryptoScope – Real-Time Cryptocurrency & Exchange Intelligence Platform | *React.js, Chart.js, Axios, Chakra*

- Engineered a real-time cryptocurrency analytics dashboard providing live price tracking, historical trend visualization (1d–365d), market cap insights, circulating supply metrics, and multi-currency support (INR, USD, EUR) for data-driven investment decisions
- Integrated third-party crypto market REST APIs using Axios and built a dynamic Single Page Application (SPA) architecture with React Router, enabling seamless navigation across Coins, Exchanges, and detailed asset analysis pages
- Developed an Exchange Intelligence module displaying ranked global exchanges with secure redirection to official trading platforms, improving investor trust and reducing phishing risks
- Implemented interactive financial data visualizations using Chart.js with optimized state management via React Hooks, ensuring efficient re-renders, loading states, and responsive performance across devices

EDUCATION

National Institute of Technology, Agartala

Bachelor of Technology in Electronics and Instrumentation Engineering

Dec 2020 – May 2024

CGPA: 8.42/10.0

TECHNICAL SKILLS

Agentic AI: Azure AI Agent SDK, Azure AI Foundry, Agent Orchestration, Tool Calling, Thread & Session State Management, LLM Workflow Validation, Multi-region Agent Deployment

Languages: JavaScript, C++, Python, KQL (Kusto Query Language), SQL

Full-Stack Development: MERN Stack (MongoDB, Express.js, React, Node.js), Redux, REST APIs, JWT Authentication

Backend & Database: Node.js, Express.js, PostgreSQL, MongoDB, RESTful APIs, Database Design, Schema Migrations

Cloud & Azure: Azure AI Foundry, Azure AI Agent SDK, Azure Functions, Azure Container Instances, Azure Resource Manager, Multi-region Deployment

Testing & Automation: Pytest, E2E Testing, GitHub Actions, CI/CD, Cloud Automation

Frontend Technologies: React, Vite, Redux, HTML, CSS, Tailwind, Axios, Responsive Design

Monitoring & Observability: IcM, Jarvis Monitors, Logging & Metrics, Observability Tools

Core Competencies: System Design, Agentic AI Systems, Agent Orchestration, Workflow Orchestration, Data Structures & Algorithms, OOP, DBMS

Tools: Git, Docker, Linux/Bash, GitHub Actions, npm, Postman, VS Code

ACHIEVEMENTS

Competitive Programming

2022 – Present

- Solved 400+ problems across Data Structures, Algorithms, SQL, and JavaScript on LeetCode, with consistent participation in weekly and biweekly contests
- 3 Star coder on HackerRank; strong foundation in problem-solving applied directly to production system design decisions
- Won a block level GK, Math & Puzzle solving tournament of 500+ participants
